## Rythamic Tunes

---

### 1.Introduction

- **Project Title:** Rythamic Tunes
- **Team ID:** NM2025TMID38613
- **Team Leader:** Ramya S & Mail ID:ramyaclg15@gmail.com
- **Team Members:**
  - Abima K & Mail ID:abimaabima390@gmail.com
  - Tharani S & Mail ID:tharaniselvam648@gmail.com
  - Sharamila U & Mail ID:uttrakumar1617@gmail.com
  - Saranya R & Mail ID:saranyaraghu@gmail.com

### 2.Project overview

**Purpose:** The purpose of the Rythamic Tunes project is to create a user-friendly music application that allows users to enjoy, explore, and organize their favorite songs and rhythms. This application aims to provide a platform where music lovers can stream or play songs, create custom playlists, and discover new tunes based on their mood and preferences.

- **Features:**
  - 🎵 User-Friendly Interface - Clean and intuitive UI for smooth user interaction.
  - 🎶 Music Playback - Play, pause, skip, and stop songs easily.
  - 📁 Create & Manage Playlists - Organize songs into personalized playlists.
  - 🔄 Rhythm-Based Song Suggestions - Smart recommendations based on beat patterns.

- 🎧 Categorized Music Library - Browse music by artist, genre, album, or mood.
- 🔍 Advanced Search - Find songs quickly using title, artist, or keywords.
- ⬇️ Offline Playback - Download songs to listen without internet.
- 🔊 Volume & Equalizer Settings - Adjust sound levels, bass, and treble.
- ❤️ Add to Favorites - Save favorite songs for quick access.
- 🗄️ Efficient Storage Use - Optimized storage for better performance.

### 3. Architecture

- **Component structure:**

- UI – User-friendly interface for easy control.
- Audio Player – Handles music play, pause, and stop.
- Playlist Manager – Create and manage custom playlists.
- Music Library – Stores and organizes songs.
- Search & Filter – Quickly find songs using keywords.
- Data Storage – Saves playlists, favorites, and history.
- Recommendation – Suggests songs based on rhythm/mood

- **State Management:**

- Keep track of whether a song is playing or paused.
- Manage the current playlist and selected song.
- Store user actions like volume level or song position.
- Handle switching between screens or features (like library → playlist).

- **Routing:**
  - Home Screen – Main dashboard or player view.
  - Library Screen – List of all available songs.
  - Playlist Screen – User’s saved playlists.
  - Now Playing Screen – Shows the currently playing song.
  - Settings Screen – App preferences (volume, theme, etc.).

## 4. Setup Instructions

- **Prerequisites:**

- Node.js & npm
- React.js
- VS code
- Git

- **Installation Steps:**

Clone the repository `git clone`

- `Git clone <your-repo-url>`
- `Cd insightstream`
- `Npm install`
- `Npm start`

## 5.Folder Structure

|--db/

|\_db.json/

|--node\_modules/      # all the node modules installed

|code/

|--public/

|\_songs/

|\_vite.svg/

|--scr/

|\_assets/

|--README.md/

|--vite.config.js/

## 6. Running The Application

- **Install Dependancies:**
  - npm install
- **Start the app:**
  - npm start
- **Access:**
  - Visit <http://localhost:5173>

## 7. State Management

- Keep track of whether a song is playing or paused.
- Manage the current playlist and selected song.
- Store user actions like volume level or song position.
- Handle switching between screens or features (like library → playlist).

## 8. Component Documentation

- **NavbarComponent:**
  - Purpose: Handles site-wide navigation including links to Home, Playlists, Categories, and About sections
  - Props: None

- **HeroBanner:**
  - Purpose: Displays the main title and tagline of the app with a featured image or animation
  - Props: None
  
- **TrendingTracks:**
  - Purpose: Shows a grid/list of top trending songs or albums
  - tracks: Array of music track objects (title, artist, albumArt, audioUrl)
  
- **GenresSection:**
  - Purpose: Displays different music genres like Pop, Rock, Lo-fi, Classical, etc.
  - genres: Array of { name, icon }
  
- **NowPlayingBar:**
  - Purpose: Sticky footer that displays currently playing track info and player controls
  - currentTrack: Object containing track details (title, artist, duration, audioUrl)
  
- **PlaylistsPanel:**
  - Purpose: Shows user-created or auto-generated playlists
  - playlists: Array of playlist objects (name, tracks, coverImage)
  
- **Footer:**
  - purpose: site-wide footer with category tags and legal text
  - props: None

## 9. User Interface

- Now Playing Bar
  - A fixed bottom player showing the current song, play/pause, next/previous, and progress bar.
  - Ensures users can control music from any page.
- Genres Section
  - Displays various music genres with icons or images.
  - Helps users quickly explore and discover songs by their preferred style.

## 10. Styling

- CSS Modules / Styled Components: For modular and reusable styles across components.
- Responsive Design: Ensures compatibility across devices (mobile, tablet, desktop).
- Dark Mode Theme: Provides a smooth visual experience ideal for music apps.
- Animations & Transitions: Used for smooth playback effects, hover actions, and interactive UI feedback.

## 11. Testing

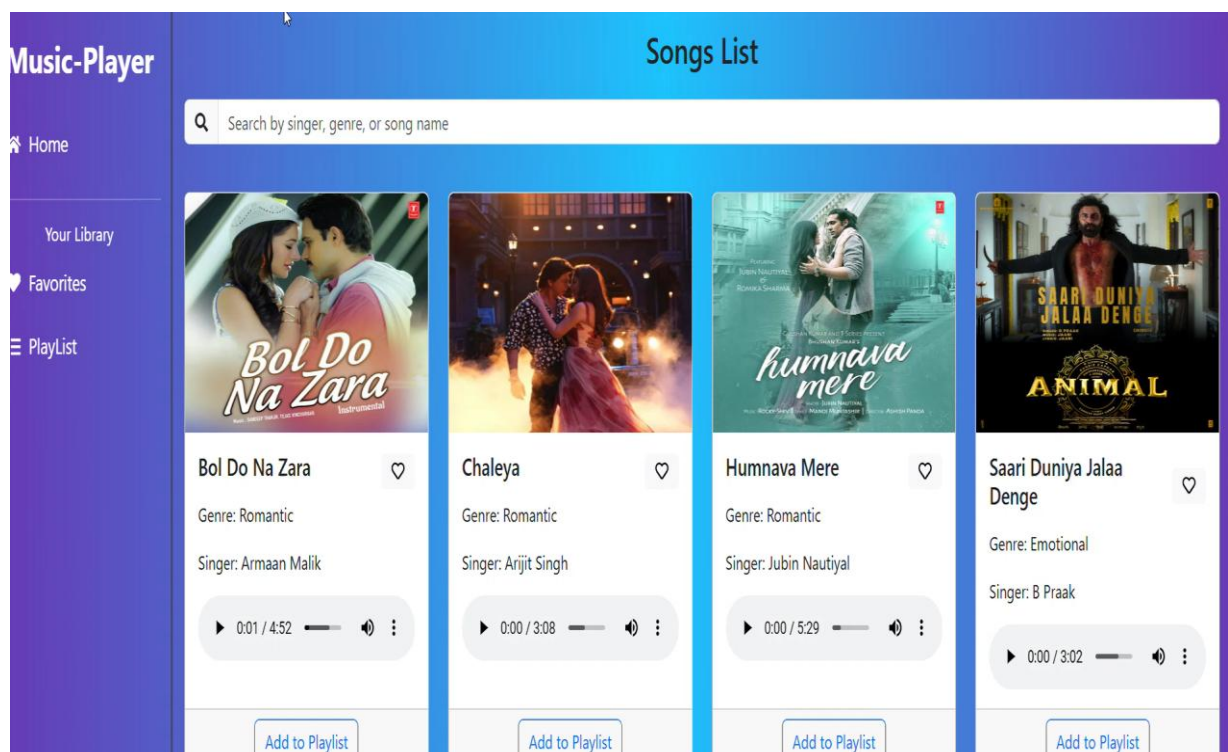

To ensure the reliability and smooth performance of Rythamic Tunes, the following testing methods were applied:

- **Unit Testing:** Individual components like the music player, playlist, and controls were tested using Jest to verify their functionality.

- **UI Testing:** User interactions such as play/pause, volume control, and navigation were tested with tools like React Testing Library.
- **Manual Testing:** The application was manually tested on various devices and browsers to ensure responsiveness and compatibility.
- **Bug Fixing & Debugging:** Console monitoring and error handling were done throughout the development process.

## OPTIONS

## SEARCHBAR

### 13. Known issues

- **Audio Playback Delay** :Slight delay occurs when switching between tracks, affecting smooth playback.
- **No User Login System** :Users can't save playlists permanently since authentication is not implemented.

### 14. Future Enhancement

- User Authentication – To save playlists and preferences permanently.
- Advanced Recommendation System – AI-based personalized song suggestions.
- Offline Mode – Download music for listening without internet.
